Education

University of Minnesota – Twin Cities <i>Honors Undergraduate Double Major in Computer Science & Data Science</i>	Minneapolis, MN Aug 2024 – Present
Academic Distinctions: Earned a 3.8 cumulative GPA - Honored with placements on the Dean’s List for the Fall 2024, Spring 2025 and Spring 2026 academic terms.	

Technical Proficiency

Languages:	C, C++, Java, Python, JavaScript, HTML, CSS, OCaml, MATLAB, SQL (MySQL)
Tools & Frameworks:	Git, WindSurf, Bolt.new, GenSpark, Canva, NotebookLM, Excel, Google Sheets
Hardware Systems:	Microcontrollers, Microprocessors (PICOLO), Embedded Sensors, CAD, 3D Printing

Professional Experience

Stealth Startup (Digital Banking & FinTech Platforms) <i>Software Engineering Intern</i>	Remote May 2025 – Present
Feature Engineering: Tasked with designing, implementing, and unit testing scalable user features for enterprise-grade, cloud-hosted corporate banking applications. Product Architecture: Drive core business logic across high-impact FinTech modules, including the Accountable tracker, digital Onboarding funnels, system Assembly, and automated VAT/GST Engines. API Integration: Collaborate on developing robust REST APIs and secure backend microservices engineered to support frictionless user lifecycle management and real-time engagement workflows. Emerging Tech Research: Lead research initiatives on advanced AI/ML capabilities, designing interactive prototypes that embed autonomous agentic systems directly into manual financial reconciliation pipelines. Agile Collaboration: Partner in technical design reviews, cross-functional code sweeps, and strict Agile scrum rituals to maintain clean documentation and scalable baseline code architecture.	

Technical Project Experience

Near-Space Research Ballooning Payload System <i>Lead Embedded Software & Data Analytics Developer</i>	Extracurricular UMN Project Fall 2024
Aerospace Systems Engineering: Developed an atmospheric research payload deployed to an altitude of 90,000 feet to evaluate the mechanical and spatial reading efficiency profiles of an RM-80 Geiger counter. Firmware Architecture: Programmed multi-core embedded C firmware on a PICOLO microcontroller to execute automated 60-second structural rotations while multiplexing continuous sensor data. Data Wrangling & Analytics: Extracted, normalized, and analyzed over 10,000 rows of sub-second telemetry and multi-axis radiation logs gathered throughout the 3+ hour flight.	
Spotify Sorter Extension & Web API Engine <i>Full-Stack Developer</i>	Personal Project 2025
Secure Interface Design: Architected a web API-driven browser extension using Java and JavaScript that utilizes secure OAuth protocols to safely access granular user metadata. Data Sorting Pipelines: Programmed algorithmic filters that sort and isolate specific artists from large collaborative playlists, instantly structuring targeted, clean sub-playlists.	

Additional Technical Projects

Space Explorers Strategy Optimizer (Java): Implemented space-routing optimization metrics utilizing trees, graphs, and multi-dimensional arrays to compute distribution maps. TextFileNoise Signal Optimizer (Java): Created a multi-dimensional matrix data cleansing pipeline that effectively parses and purges statistical anomalies from noisy datasets.	
---	--

Extracurricular Leadership & Engagement

Executive Board Leadership: Formulate strategies and steer programming as an active Executive Board Member across the Society of Optics and Photonics (SOP), Hindi Student Association (HSA), and DataNexus. Collegiate Athletics: Selected to represent the University of Minnesota at the Midwest Regional Championship and the National Collegiate Cricket League; active player for the UMN Cricket Club. Humanitarian Impact: Mentored underprivileged students and coordinated community healthcare resource allocation through on-the-ground volunteer work with the Panchajanya Foundation and Abhyudaya.
